

Kaushik Das

Senior Consultant
AI Engineer

Mobile : +44 7388449042
Email : kaushik.das@uk.ey.com
Office : MLP London

Technical skills:

Competency level: Advanced

- Python | SQL | FastAPI
- LLM Orchestration | RAG
- Agentic Frameworks
- Elasticsearch
- Machine Learning
- TensorFlow | PyTorch
- OpenCV | YOLO | Keras
- CI/CD

Industry lines (Business Skills):

- Healthcare & Clinical AI (Intermediate)
- Marketing Analytics (Intermediate)
- Insurance & Claims (Intermediate)
- Engineering Docs (Intermediate)
- Project Management (Beginner)

Other skills:

- Data Analysis
- Stakeholder engagement
- Backend Development

Background

- ▶ Kaushik is a Senior Consultant in EY's AI&D Technology Consulting practice, focusing on applied AI, agentic systems, machine learning and data analysis.
- ▶ Kaushik joined EY London in September 2026 and has over 5 years experience delivering production AI and data science across healthcare, marketing operations and enterprise analytics.
- ▶ Builds tool-calling LLM agents with deterministic safety boundaries, grounded retrieval, and forecasting models measured with evals before they ship.

Professional Experience

AI Campaign Operations Platform

- Worked as AI Engineer on an AI-led marketing operations platform integrating Google Ads and Salesforce data for campaign planning and optimisation.
- Developed an AI campaign planning solution that analyses performance and plans changes using LLMs with human approval controls, supporting 30% of new customer generation.
- Built an analytics chatbot and optimised its LLM workflows, cutting prompt tokens 48% through tool routing and 62% through better context handling.
- Implemented cron-based data integration jobs to synchronise Google Ads and Salesforce data, keeping the automations running on current data.

AI Search and Insight Platform

- Led development of an AI search and insight platform helping organisations understand their brand and competitor visibility across GPT-4o, Gemini, Claude and Grok.
- Developed agents to analyse real customer questions across markets, identify brand and competitor mentions, and highlight ways to improve visibility.
- Implemented RAG using Elasticsearch embeddings and deployed on FastAPI and Azure with evaluation and monitoring capabilities.

Hospital Discharge Assistant

- Developed an AI-powered hospital discharge assistant combining predictive modelling with analysis of clinical notes to support discharge decisions.
- Built an XGBoost model to predict 30-day readmission risk and integrated GPT-4o to generate discharge-readiness scores for clinical decision support.
- Prepared and reconciled patient data across inconsistent clinical coding and implemented patient-level train/test splitting to prevent data leakage.

Professional Experience

Financial RAG and Claims Intelligence

- Developed a RAG solution over insurance claims and incident records so claims handlers could query in plain language and get answers with sources.
- Analysed historical claims data to identify recurring seasonal and location-based patterns, helping surface predictable operational exposure.
- Used LLMs, RAG and semantic search to make large volumes of claims information easier to investigate and interpret.

Document Intelligence and Quoting Automation

- Worked as GenAI Developer automating information extraction from engineering documentation and CAD PDFs using computer vision and LLM document intelligence, improving quotation efficiency by 30%.
- Built a multi-tenant quotation platform using FastAPI and MongoDB, integrating LLM agents for document classification, information extraction and contextual recommendations.
- Deployed machine learning models into production and implemented monitoring pipelines to track model performance and model drift.

Computer Vision and Predictive Analytics

- Developed machine learning pipelines for real-time image processing and visual inspection using OpenCV and Scikit-Image as part of a healthcare R&D programme.
- Performed data cleaning and preprocessing including noise reduction, contrast enhancement and feature extraction to prepare image data for training.
- Built a Random Forest demand-forecasting model that increased sales by 23%, and deployed applications on AWS with Docker and CI/CD.

Accreditations & Certifications

- MSc Artificial Intelligence, University of Aberdeen
- BTech Electronics and Communication, IEM Kolkata
- AWS Certified Cloud Practitioner
- IBM Machine Learning with Python
- Google Agile Project Management
- Scottish Government Postgraduate Scholarship
- HackerRank Certified Software Engineer
- Mistral AI Hack UK Finalist | Encode London Hackathon Winner
